electromagnetic fields in biological systems pdf - Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes. Tue, 04 Dec 2018 22:30:00 GMT

OET - Bulletins On-line | Federal Communications Commission - The best understood biological effect of electromagnetic fields is to cause dielectric heating. For example, touching or standing around an antenna while a high-power transmitter is in operation can cause severe burns. These are exactly the kind of burns that would be caused inside a microwave oven. [citation needed] This heating effect varies with the power and the frequency of the ...
